Foundational Stage Strengthening Program

Baseline assessment with 42 pre-primary children

At PUMS Pavithramanikkam, we conducted a baseline assessment with 30 UKG children in English and Math. It is an English-medium school.

It was a one-on-one assessment with the children. At PUMS Perupugazhur school, we conducted a math baseline assessment with 15 children. Further, we are planning to analyze this data and plan our intervention accordingly.

Implementation of a thematic lesson plan for holistic Child development

We designed a thematic lesson plan and executed it with children. The plan covers the holistic development of children. Some of the key learning experiences are Circle Time, Conversation, Free Play, Language Time, Cognitive Time, Physical Activity, Independent Work Time, and Outdoor Play. The plan also incorporated activities from the Anganwadi's Curriculum Book. The vegetables and fruits theme was covered this month.

Further, we had Let's Observe Time every Thursday, where children can be taken on a nature walk, school campus walk, community walk, Farm walk, and Temple walk.

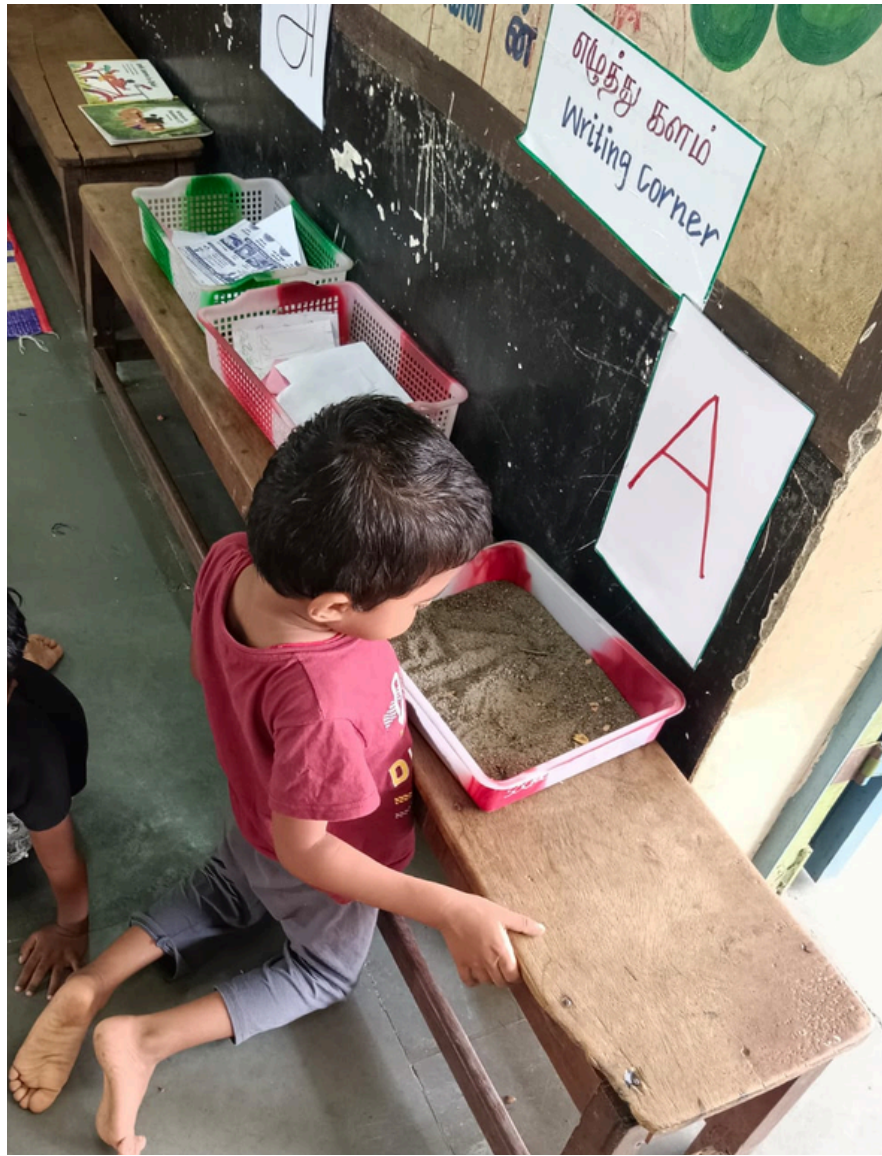

Parent Engagement for Supporting Children's Learning

We participated in a pre-primary parent meeting at PUMS Pavithramanikkam. Around 25 parents participated in the meeting. We shared how parents can support their children's learning at home. In particular, various simple activities around developmental domains (Language, Cognitive, socio-emotional, physical, and Creativity) were shared.

Initiating intervention with class 1 and 2 children

We initiated our intervention with Class 1 and 2 children in one of the aided schools in Thiruvavarur. This month was mainly used to build rapport with children and teachers. Further, our teacher supported teachers in conducting lessons according to the plans provided in the teacher's handbook. We are hoping to complete the baseline assessment with these 25 children in September.

Establishment of various learning corners

Free play enables children to become independent learners and provides scope for exploration and creativity. Further, this helps children to build skills such as socialisation, waiting for their turn, and keeping materials back in the designated place.

For this to happen, the establishment of learning corners plays an important role. Some of the corners are the Reading corner, Creativity corner, Dramatic play corner, Construction corner, and Writing corner.

Presenting Our Work to the Rotary Club of Thiruvarur

In August, I had an opportunity to present our work Rotary club of Thiruvarur. At a time, I was able to share our work with 35 club members from Thiruvarur.

Few artefacts of Children in August 2026

Children doing picture reading in reading corner

Child exploring materials independently

Children drawing in writing corner

Children doing a pasting activity in the creativity corner

Few artefacts of Children in August 2026

Children are painting during free play time

Children trying to write letter in sand tray
